

# Clear - Workout Generator App (Master Lovable Prompt)

Build a mobile-first React app called **Clear** - an AI-powered workout generator with a Cyberpunk utilitarian aesthetic. The app helps users generate personalized workouts with minimal input, then review, edit, and execute them step-by-step.

---

## Design System

### Color Palette

Primitives (use these exact hex codes):

- **Purple:**  #9966CC (primary brand)
- **Indigo:**  #4F479A (secondary)
- **Orange:**  #F17B14 (accent/CTAs)
- **Rose:**  #B62F57 (high intensity indicator)
- **Lime:**  #8DE937 (low intensity indicator)
- **Neutral:**  #FFFEFB (off-white text),  #161313 (near-black background)

### Usage:

- Background: Dark ( #161313) with subtle gold-to-blue gradient
- Primary CTAs: Orange gradient with glow
- Active states: Filled orange/lime
- Inactive states: Outline only with glowing border
- Text: Off-white ( #FFFEFB)
- Data/Technical elements: Lime accent

## Typography

Fonts (load via Google Fonts):

- **Display/Headers:** Rajdhani (weights: 500, 600, 700) - uppercase, wide tracking
- **Body:** Inter (weights: 400, 500, 600)
- **Technical/Data:** JetBrains Mono (weight: 400) - monospace, uppercase for labels

## Hierarchy:

- Screen titles: Rajdhani 48px bold uppercase
- Section headers: Rajdhani 32px semibold uppercase
- Body text: Inter 16px regular
- Technical labels: JetBrains Mono 12px uppercase, wide letter-spacing

## Visual Effects

### Glassmorphic Cards:

- `background: rgba(79, 71, 154, 0.04)`
- `backdrop-filter: blur(6px)`
- `border: 1px solid rgba(170, 169, 166, 0.15)`
- `box-shadow: inset 0 1px 1px rgba(255, 255, 255, 0.05), 0 0 20px rgba(79, 71, 154, 0.15)`

### Glowing Buttons:

- Primary CTA: Orange gradient with `box-shadow: 0 0 8px rgba(241, 123, 20, 0.3)`
- Hover: Increase glow to `0 0 16px rgba(241, 123, 20, 0.5)`

### Grain Texture (Optional):

- 8% opacity SVG noise overlay on background for CRT aging effect

## Component Styles

### Buttons:

- **Primary CTA:** Orange gradient (`#F17B14` to `#C16210`), uppercase Rajdhani, glowing border
- **Ghost/Outline:** Transparent bg, lime/orange border, inset glow
- **Touch targets:** Minimum 48px height for mobile

### Inputs:

- Dark transparent background (`rgba(79, 71, 154, 0.05)`)
- Thin border with 3px colored left accent stripe
- Focus: Border glow effect matching stripe color

## Cards:

- Glassmorphic blur treatment
  - Soft corner accent (top-right 2px border in orange)
  - Adequate padding (1.5rem internal)
- 

## Screen 1: Generation Input

**Purpose:** User configures workout parameters quickly (30 seconds target)

### Layout (Top to Bottom):

#### 1. Header

- "CLEAR" logo (left)
- Menu icon (right)

#### 2. Intensity Slider

- Large slider (Cyberpunk angular style)
- Display current value prominently (e.g., "8")
- Range: 1-10
- Large touch target
- Color: Consistent (doesn't change as you slide)

#### 3. Anchor Movement Selection

- **3 columns × 2 rows grid**
- Options: SQUAT, HINGE, PRESS, PULL, ROTATION, SURPRISE
- **Active state:** Filled background (orange)
- **Inactive state:** Outline only (glowing border)
- All caps, bold text
- Large, tappable buttons

#### 4. Location Preset (Collapsible Accordion)

- Default: Collapsed showing current location + chevron
- Expanded: List of locations + "Add New" link
- Minimal visual weight

## 5. Optional Fields

- **Time:** Small text input, placeholder "45 min"
- **Notes:** Textarea, placeholder "Any notes or modifications..."
- Always visible but de-emphasized (smaller)

## 6. Generate Button (Sticky Bottom)

- Full-width primary CTA
- Text: "GENERATE WORKOUT" with arrow (→)
- Orange gradient, glowing border
- Always visible (sticky)

### Interactions:

- Tap intensity slider to adjust
- Tap anchor button to select (single selection)
- (Optional) Expand location, add time/notes
- Tap Generate → Navigate to Screen 2

### State to Pass:

- intensity (1-10)
  - anchor (squat/hinge/press/pull/rotation/surprise)
  - mood (optional text)
  - time (optional)
  - notes (optional)
  - location (from preset)
- 

## Screen 2: Review & Edit

**Purpose:** Review generated workout, make edits, then start

### Layout:

#### 1. Header

- Back button (←)

- "CLEAR" logo
- Menu icon

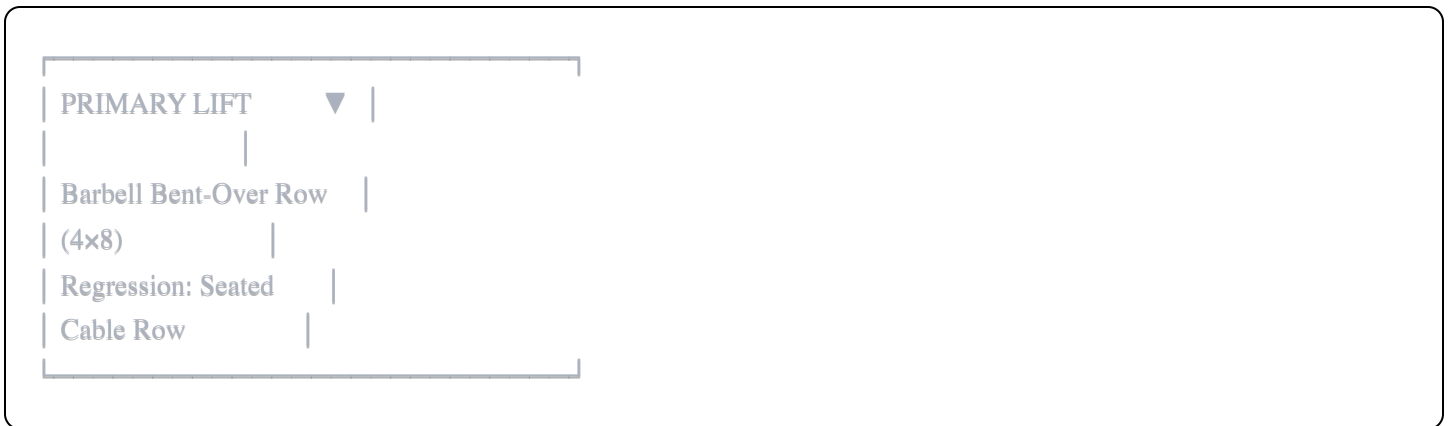

## 2. Workout Overview

- **Title:** Large, bold (e.g., "High Intensity Pull Focus")
- **Coach Overview:** 2-3 sentence description
- **Metadata Badges:** Time estimate (45m), Intensity (8), Anchor type (PULL)

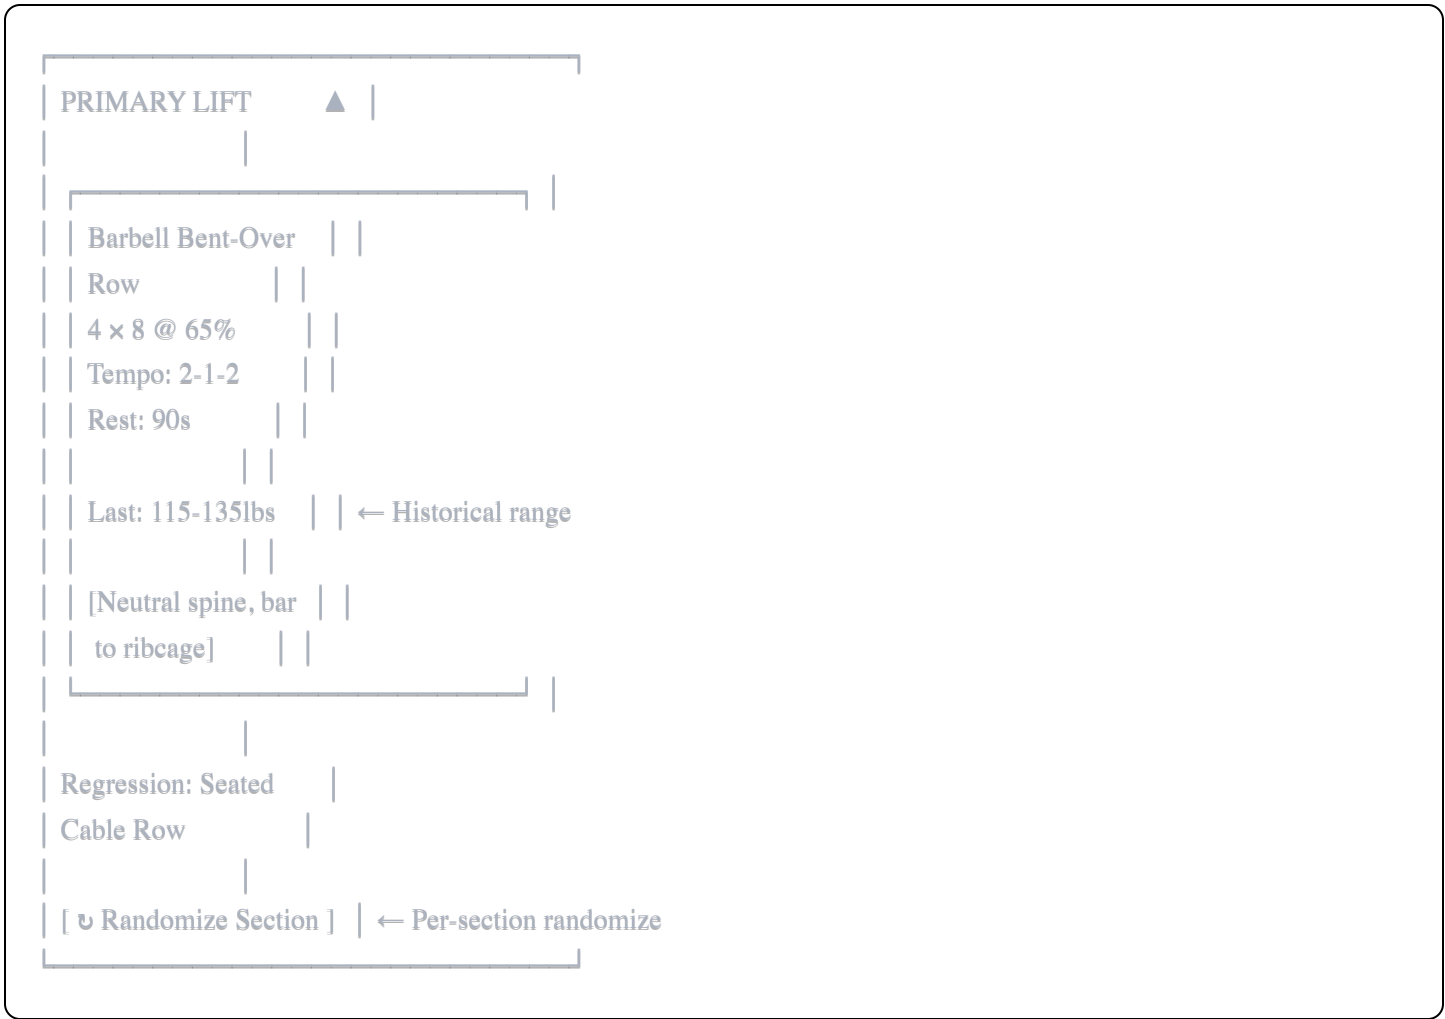

## 3. Workout Sections (6 Total)

- Sections: Warm-Up, Primary Lift, Accessory Block, Rotational/Stance, Conditioning, Cooldown

### Section Card (Collapsed State):

### Section Card (Expanded State):

**Exercise Card Details:**

- Exercise name (bold, large)
- Sets × Reps @ Effort%
- Tempo notation (e.g., "2-1-2")
- Rest time (e.g., "90s")
- Historical data range (e.g., "Last: 115-135lbs")
- Coaching cues (bracketed, subtle text)
- Regression/Progression options

**Interactions:**

- Tap section card → expand/collapse
- Tap exercise name → edit modal (text input to change exercise)
- Tap "Randomize Section" → regenerate just that section
- Scroll to see all sections

#### 4. Start Workout Button (Sticky Bottom)

- Full-width primary CTA
- Text: "START WORKOUT" with arrow
- Orange gradient, glowing

#### State:

- Generated workout object with 6 sections
  - Each section contains exercises with sets/reps/tempo/rest/notes
  - Historical data (mocked for prototype - show range like "115-135lbs")
- 

### Screen 3: Workout Mode (Execution)

**Purpose:** Execute workout section-by-section with notes and timers

#### Layout:

##### 1. Header

- Back button (←)
- Section name + progress: "PRIMARY LIFT (2/6)"
- Menu icon

##### 2. Timer Toggle

- Display ONE timer at a time (large, prominent)
- **Section Timer:** "🕒 SECTION: 08:34"
- **Overall Timer:** "🕒 OVERALL: 15:22"
- Toggle icon (⇌) to switch between them
- Tap anywhere on timer to toggle

##### 3. Exercise List (Current Section)

#### Exercise (Collapsed):

Barbell Bent-Over Row

4 x 8 @ 65%

[ + ]

Exercise (Expanded):

Barbell Bent-Over Row

4 x 8 @ 65%

Tempo: 2-1-2

Rest: 90s

Neutral spine, bar to ribcage

NOTES [ + ]

Interactions:

- Tap exercise → expand/collapse details
- Tap [ + ] → open note modal (half-sheet)
- If note exists, show [ 📝 ] icon instead
- Tap [ 📝 ] → open modal with existing note (editable)

Note Modal (Half-Sheet):

BARBELL BENT-OVER ROW

185lbs x 8,8,8,7

← Large text input

[Cancel]

[Save]

4. Section Notes

- After all exercises
- "SECTION NOTES" label with [ + ] icon
- Same modal pattern

## 5. Navigation (Sticky Bottom)

- ← **Back** (ghost style, left)
- **Progress dots:** [●●○○○○] (center)
- **Next** → (primary CTA, right)

### Interactions:

- Tap "Next" → advance to next section (section timer resets)
- Tap "Back" → previous section
- Swipe left/right → navigate sections (gesture alternative)
- On final section (Cooldown), "Next" becomes "Finish →"
- Tap "Finish" → Summary/Save screen

### Summary/Save Screen:

- Show workout title + completion time
- List all sections with notes captured
- "SAVE SESSION" button (primary CTA)
- Saves to local storage (IndexedDB or localStorage)

### State:

- Current section index (1-6)
  - Notes per exercise (object keyed by exercise name)
  - Section notes per section
  - Overall timer start time
  - Section timer start time
- 

## User Flow Summary

Screen 1 (Input)

↓ (Generate)

Screen 2 (Review)

↓ (Start Workout)

Screen 3 (Execution)

↓ (Finish)

Summary/Save

↓ (Save)

Back to Screen 1

## Technical Requirements

### Tech Stack

- **Framework:** React (functional components, hooks)
- **Styling:** Tailwind CSS (custom colors defined in config)
- **State Management:** React Context or useState (simple, no Redux needed)
- **Routing:** React Router (or simple conditional rendering for prototype)
- **Storage:** localStorage for workout history (IndexedDB if available)

### Key Features to Implement

#### 1. Mock Workout Generation:

- On Screen 1 "Generate" button, create a mock workout object
- Include 6 sections with exercises, sets/reps, tempo, rest, notes
- Use the user's intensity/anchor to vary content slightly

#### 2. Editable Exercises:

- On Screen 2, tapping exercise name opens a modal
- Text input to change exercise name
- Save updates the workout object

#### 3. Section Randomize:

- On Screen 2, "Randomize Section" button regenerates exercises for just that section
- Keep other sections unchanged

#### 4. Timers:

- Overall timer starts when user taps "Start Workout"
- Section timer resets each time user advances to new section

- Both count up (HH:MM:SS or MM:SS format)

## 5. Note Taking:

- Per-exercise notes stored in state
- Section-level notes stored separately
- Modal/half-sheet UI for text input

## 6. Navigation:

- Manual advancement via "Next" button
- Swipe gestures (left/right) to navigate sections
- "Finish" on final section transitions to summary

## 7. Save Session:

- Store completed workout with notes in localStorage
- Include: date, workout title, intensity, anchor, all exercises with notes
- (For prototype, just console.log the save or show confirmation)

## Mobile-First Considerations

- **Touch targets:** Minimum 48px height
- **One-handed use:** Critical actions within thumb reach
- **Large text:** Exercise names 18-24px, rep schemes 16-18px
- **Sticky elements:** Generate button (Screen 1), Start Workout (Screen 2), Navigation (Screen 3)
- **Forgiving interactions:** Entire rows tappable, not just icons
- **Minimal scrolling in Screen 3:** Only within current section
- **Visual hierarchy:** Most important info (exercise name, reps) largest and highest contrast

## Design Implementation Notes

### Custom Tailwind Config:

```
javascript
```

```
// tailwind.config.js
module.exports = {
  theme: {
    extend: {
      colors: {
        purple: { DEFAULT: '#9966CC', 500: '#9966CC' },
        indigo: { DEFAULT: '#4F479A', 500: '#4F479A' },
        orange: { DEFAULT: '#F17B14', 500: '#F17B14' },
        rose: { DEFAULT: '#B62F57', 500: '#B62F57' },
        lime: { DEFAULT: '#8DE937', 500: '#8DE937' },
        neutral: { 50: '#FFFEFB', 900: '#161313' },
      },
      fontFamily: {
        display: ['Rajdhani', 'sans-serif'],
        body: ['Inter', 'sans-serif'],
        mono: ['JetBrains Mono', 'monospace'],
      },
    },
  },
}
```

### Background Gradient:

- Use CSS gradient: `linear-gradient(180deg, #8B6F2D 0%, #1F4A66 60%, #0D1B24 100%)`
- Or solid dark background (`#161313`) with subtle radial accents

### Glassmorphic Cards:

- Use Tailwind utilities + custom CSS for backdrop-filter
- Example: `bg-indigo-500/5 backdrop-blur-md border border-neutral-700/20`

### Button Hover Effects:

- Translate up slightly: `hover:-translate-y-0.5`
- Increase glow: `transition-all duration-200`

# Mock Data Structure

## Generated Workout Object

javascript

```
{
  id: "workout_001",
  title: "High Intensity Pull Focus",
  overview: "Strengthen posterior chain and scapular control. Big compound pulls into stability drills.",
  intensity: 8,
  anchor: "pull",
  estimatedTime: 45,
  sections: [
    {
      name: "Warm-Up",
      exercises: [
        { name: "Cat-cow", reps: "5 breaths" },
        { name: "Scap wall slides", reps: "8 reps" },
        { name: "Band pull-aparts", reps: "12 reps" }
      ]
    },
    {
      name: "Primary Lift",
      exercises: [
        {
          name: "Barbell Bent-Over Row",
          sets: 4,
          reps: 8,
          effort: "65%",
          tempo: "2-1-2",
          rest: "90s",
          historical: "115-135lbs",
          cues: "Neutral spine, bar to ribcage",
          regression: "Seated Cable Row"
        }
      ]
    }
  ],
  // ... more sections
}
```

## Final Notes

- **Prioritize functionality over perfection:** Working prototype beats pixel-perfect design
- **Use placeholder data:** Mock workouts are fine for prototype
- **Focus on core flow:** Input → Review → Execute → Save
- **Keep it mobile-optimized:** Test on phone viewport (375px width)
- **Cyberpunk aesthetic:** Dark, glowy, angular, functional - not polished/corporate

Build this as a single-page React app with component-based routing (e.g., show/hide screens based on state). Use Tailwind for all styling. Make it feel like a functional HUD from a sci-fi universe - technical, utilitarian, and efficient.

---

**Goal:** Create a working prototype that demonstrates the full user flow with Clear's unique Cyberpunk aesthetic and mobile-first design.
