

Clear - Onboarding (Wireframe)

Created: December 22, 2025

Status: Locked for MVP

Phase: 2B Complete

Purpose

First-time user setup flow. Collects only what makes workouts better — no fluff, no personal info.

Context: User launches app for the first time. Goal is to get them from download → first workout in under 3 minutes.

Flow: 5 steps, linear progression, no skipping.

Step 1: Equipment / Location

Purpose: Know what exercises are possible based on available equipment.

CLEAR

WHAT'S YOUR GYM SETUP?

○ MINIMAL

Bodyweight, bands, mat

○ HOME GYM

Dumbbells, bench, basics

● BUILDING GYM

Rack, barbell, dumbbells

○ FULL GYM

Commercial, everything

← Selected

CUSTOMIZE EQUIPMENT

▶

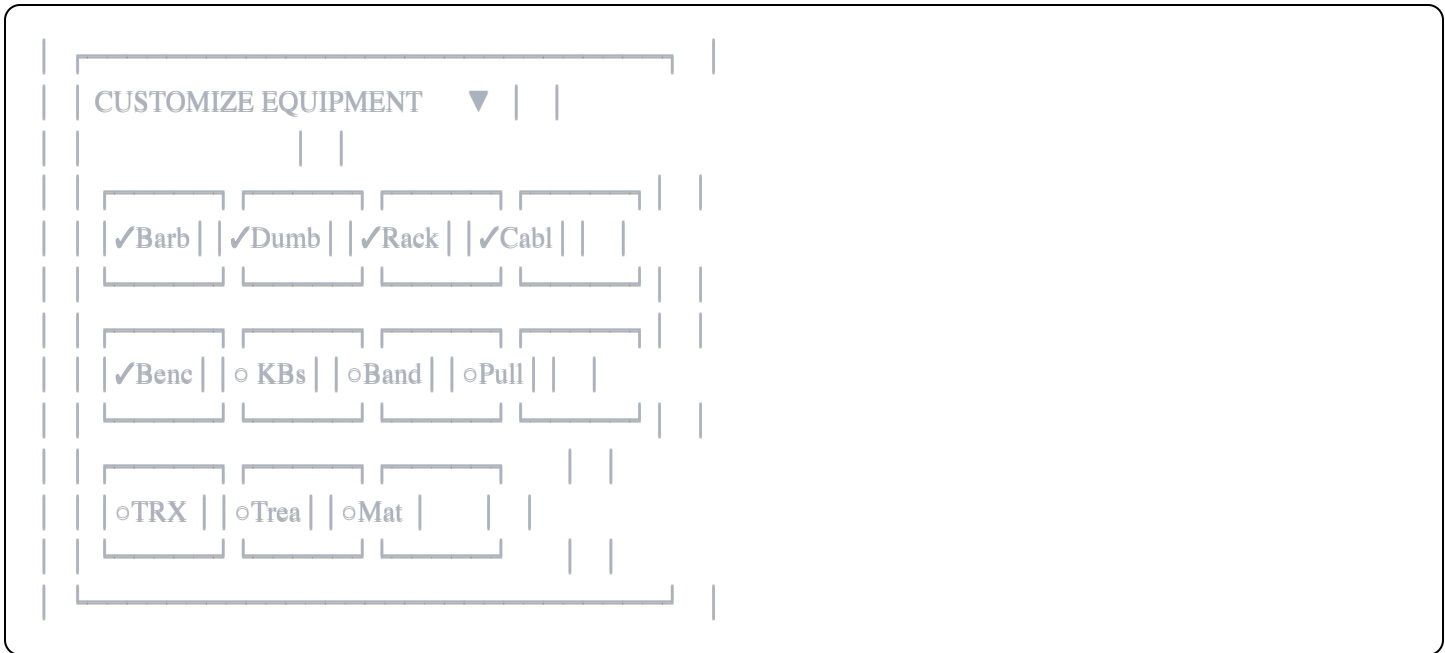

← Accordion (closed)

You can add more locations later

[NEXT →]

Step 1 of 5

Accordion Expanded:

Interactions:

- Tap tier → Selects it, populates equipment toggles
- Tap accordion → Expands to show equipment chips
- Tap chip → Toggles equipment on/off
- This becomes the user's default location

Equipment by Tier: See [Clear_-_Content_Definitions.md](#) for full list.

Step 2: Experience Level

Purpose: Adjust exercise complexity and coaching cue verbosity.

← CLEAR

HOW FAMILIAR ARE YOU WITH THE GYM?

○ NEW TO THIS

Still learning the movements. More guidance is helpful.

○ SOME EXPERIENCE

Know the basics.
Comfortable with common exercises.

● CONFIDENT ← Selected

Just tell me what to do.
I'll figure it out.

[NEXT →]

Step 2 of 5

Interactions:

- Tap option → Selects it (single select / radio behavior)
- Back arrow → Returns to Step 1

What This Affects (Under the Hood):

- Exercise selection (goblet squat vs. barbell back squat)
- Coaching cue detail level
- Default intensity suggestion

What This Does NOT Do:

- Does not lock users out of any intensity level
 - Does not require tutorials or external links
 - Does not gatekeep movements
-

Step 3: Goals & Workout Structure

Purpose: Customize what sections a workout includes.

← CLEAR

WHAT ARE YOU GOING FOR?

○ STRENGTH

Heavy lifts, longer rest

● BALANCED

A little of everything

○ CONDITIONING

Circuits, shorter rest

○ QUICK & EFFECTIVE

Fewer sections, get done

CUSTOMIZE SECTIONS

▶

← Accordion (closed)

You can change this anytime

[NEXT →]

Step 3 of 5

Accordion Expanded:

CUSTOMIZE SECTIONS ▼

✓Warm

✓Mobi

✓Prim

✓Accs

○Skil

○Carr

✓Core

○Stab

✓Cond

✓Cool

What do these mean? ▶

← Expandable legend

Legend Expanded:

What do these mean? ▼

WARM-UP

Light movement to get your
body ready

MOBILITY

Focused flexibility and
range of motion work

PRIMARY LIFT

The main heavy movement —
squats, deadlifts, presses

ACCESSORY

Supporting work for the
primary lift

SKILL / POWER

Explosive movements —
jumps, throws, Olympic lifts

CARRIES

Loaded carries — farmer's
walks, suitcase carry

CORE

Rotational and stability
work for your midsection

STABILITY / BALANCE

Single-leg work,
proprioception focus

CONDITIONING

Cardio, circuits, or
higher-intensity finishers

COOLDOWN

Stretching and recovery
to end the session

Interactions:

- Tap goal preset → Selects it, updates section toggles to preset defaults
- Tap accordion → Expands section chips
- Tap chip → Toggles section on/off
- "What do these mean?" → Expands legend with descriptions
- Back arrow → Returns to Step 2

Sections: See `Clear_-_Content_Definitions.md` for full list and goal preset mappings.

Anchor Logic: If Primary Lift is toggled OFF, the Generation Screen will show UPPER/LOWER/FULL BODY anchors instead of SQUAT/HINGE/PRESS/PULL/ROTATION/SURPRISE.

Step 4: Limitations

Purpose: Avoid movements that cause pain or problems.

← CLEAR

ANYTHING WE SHOULD
WORK AROUND?

Old injuries, problem areas,
or movements you want to avoid.

Bad left shoulder from
years ago. Overhead press
feels sketchy sometimes.

[SKIP FOR NOW] [NEXT →]

Step 4 of 5

Interactions:

- Type in textarea → Free text, LLM parses later
- "Skip for now" → Proceeds without limitations (can add later in Settings)
- "Next" → Proceeds with entered text
- Back arrow → Returns to Step 3

How It Works:

- Text passed to workout generation as context
- LLM parses and avoids problematic movements

- Can be updated anytime in Settings
-

Step 5: Confirmation

Purpose: Review setup before generating first workout.

← CLEAR

HERE'S YOUR SETUP

LOCATION

Building Gym

Barbell, Dumbbells, Rack,

Cables, Bench

[Edit]

EXPERIENCE

Confident

[Edit]

WORKOUT STRUCTURE

Balanced (6 sections)

[Edit]

LIMITATIONS

"Bad left shoulder..."

[Edit]

[GENERATE FIRST WORKOUT →]

Step 5 of 5

Interactions:

- Review all selections
- Tap [Edit] → Returns to that specific step
- "Generate First Workout" → Saves setup, proceeds to Generation Screen (Screen 1)

- Back arrow → Returns to Step 4

Navigation Summary

Screen	Back	Next
Step 1: Equipment	—	Step 2
Step 2: Experience	Step 1	Step 3
Step 3: Goals	Step 2	Step 4
Step 4: Limitations	Step 3	Step 5 (or Skip)
Step 5: Confirmation	Step 4	Generation Screen

Data Saved After Onboarding

- Default location name
- Equipment list (toggles)
- Experience level
- Goal preset
- Enabled sections
- Limitations text

All stored locally. Used for every workout generation going forward.

Design Notes

- **Progress indicator:** "Step X of 5" shown on every screen
- **Back enabled:** After Step 1, user can always go back
- **No skip for core steps:** Only Limitations (Step 4) has skip option

- **Accordion pattern:** Equipment and Sections use same collapsible UI
 - **Helper text outside accordion:** Reassurance copy ("You can change this anytime") stays visible
-
