

Clear - Future Work & Known Issues

Active Issues (Blocking)

Background Gradient Not Displaying

Status: In Progress

Priority: Medium

Description: CSS gradient background on the style guide is not rendering visibly in browser, despite:

- HTML showing gradient is applied in DevTools
- Simple test component working with same gradient
- All other styling (fonts, colors, blur effects) working correctly

Attempted Solutions:

- Tried static PNG images (too dark)
- Tried CSS gradients with various brightness levels
- Adjusted z-index from -z-20 to z-0
- All gradient values render in DevTools but don't display on page

Current Workaround: Dark background (near-black) is acceptable for Cyberpunk aesthetic

Next Steps to Try:

- Apply gradient directly to outer container instead of separate fixed layer
 - Check for conflicting Tailwind utilities
 - Test with inline styles only (no Tailwind classes)
 - Investigate potential browser rendering issue
-

Future Enhancements (Post-MVP)

1. Animated Mesh Gradient Background

Priority: Low

Description: Animate the gold/blue gradient background with slow-moving color pools, ambient drift, or reactive intensity changes based on workout state.

Implementation Notes:

- Use layered radial gradients with CSS animations
- Keep performance in mind (especially mobile)
- Could tie to workout intensity level (visual feedback)

2. Grain Texture Refinement

Priority: Low

Description: Current grain texture (8% opacity SVG noise) might need adjustment once background gradient is visible.

Considerations:

- May need to reduce opacity if gradient is brighter
 - Ensure grain doesn't obscure text readability
 - Test on various screen brightness levels
-

Completed Today (Dec 17, 2025)

Setup & Environment

- ☒ Step 0: Tooling installed (Node.js, Git, GitHub CLI, VS Code)
- ☒ Git repository initialized and pushed to GitHub
- ☒ App deployed to Vercel: <https://clear-app-ashen.vercel.app/>
- ☒ Local development environment working

Design System

- ☒ Color primitives defined (purple, indigo, orange, rose, lime, neutral)
- ☒ Typography system established (Rajdhani, Inter, JetBrains Mono)
- ☒ Button styles created (primary CTA, ghost, alert)
- ☒ Input field styles defined
- ☒ Card/container treatments with glassmorphic blur effects
- ☒ Progress indicators (intensity bars)

-  Status indicators (active, in progress, max effort, idle)
-  Fonts loaded via Google Fonts in index.html

Documentation

-  Complete design system spec created
 -  Tooling reference guide for all installed tools
 -  Future work tracking initiated
-

Tomorrow Morning (Dec 18, 2025)

Priority 1: Wireframes

Goal: Create preliminary wireframes to show boss by EOD

Screens to Wireframe:

1. Generation Input Screen

- Intensity slider (1-10)
- Mood text input
- Anchor selection buttons (6 options)
- Optional: time, notes inputs
- Location preset selector
- Generate button

2. Review & Edit Screen

- Generated workout display
- 6-section structure visible
- Edit capability for exercises/sets/reps
- Historical data reference
- Start Workout CTA
- Randomize Again option

3. Workout Mode (Execution)

- One section at a time
- Exercise list with note fields

- Section timer
- Overall workout timer
- Next Section button
- Save Session button

Approach: Use Lovable for rapid prototyping with locked design system specs

Priority 2 (If Time): Resolve Background Issue

- Try nuclear option (gradient on outer container)
 - Test without Tailwind classes
 - Document solution for future reference
-

Notes for Next Session

Context to Remember

- Background gradient works in isolation but not in full component
- All other styling (glassmorphic cards, fonts, colors) is working correctly
- Design system is locked and ready for Lovable
- Cyberpunk utilitarian aesthetic with gold/blue color scheme
- Focus is on shipping MVP, not perfection

Files Modified Today

- `clear-app/src/StyleGuide.jsx` - Full style guide component
- `clear-app/src/App.jsx` - Updated to render StyleGuide
- `clear-app/index.html` - Added Google Fonts
- `clear-app/public/bg-desktop.png` - Background gradient (not displaying)
- `clear-app/public/bg-mobile.png` - Mobile background (not displaying)

Quick Start Commands

```
bash
```

```
cd ~/clear-app
```

```
npm run dev
```

Opens at localhost:5173

To open VS Code

```
code .
```

To open Claude Code

```
cc
```
